Laparoscopic de-roofing of simple renal cyst: procedure-specific information

What is the evidence base for this information?

This leaflet includes advice from consensus panels, the British Association of Urological Surgeons, the Department of Health and evidence-based sources; it is, therefore, a reflection of best practice in the UK. It is intended to supplement any advice you may already have been given by your urologist or nurse specialist as well as the surgical team at Addenbrookes. Alternative treatments are outlined below and can be discussed in more detail with your Urologist or Specialist Nurse.

What does the procedure involve?

Surgical removal of one or more kidney cysts by keyhole surgery; this is only indicated after earlier cyst aspiration has confirmed that the cyst is responsible for pain

What are the alternatives to this procedure?

Percutaneous aspiration, aspiration & sclerotherapy, open de-roofing, observation
What should I expect before the procedure?

You will usually be admitted on the same day as your surgery. You will normally undergo preassessment on the day of your clinic or an appointment for preassessment will be made from clinic, to assess your general fitness, to screen for the carriage of MRSA and to perform some baseline investigations. After admission, you will be seen by members of the medical team which may include the Consultant, junior Urology doctors and your named nurse.

You will be asked not to eat or drink for 6 hours before surgery and, immediately before the operation, you may be given a pre-medication by the anaesthetist which will make you dry-mouthed and pleasantly sleepy.

You will need to wear anti-thrombosis stockings during your hospital stay; these help prevent blood clots forming in the veins of your legs during and after surgery.

Please be sure to inform your Urologist in advance of your surgery if you have any of the following:

- an artificial heart valve
- a coronary artery stent
- a heart pacemaker or defibrillator
- an artificial joint
- an artificial blood vessel graft
- a neurosurgical shunt
- any other implanted foreign body
- a prescription for Warfarin, Aspirin or Clopidogrel (Plavix®)
- a previous or current MRSA infection
- high risk of variant CJD (if you have received a corneal transplant, a neurosurgical dural transplant or previous injections of human-derived growth hormone)

What happens during the procedure?

Normally, a full general anaesthetic will be used and you will be asleep throughout the procedure. In some patients, the anaesthetist may also use an epidural anaesthetic which improves or minimises pain post-operatively.

A bladder catheter is normally inserted during the operation to monitor urine output.
What happens immediately after the procedure?
You will be given fluids to drink from an early stage after the operation and you will be encouraged to mobilise as soon as you are comfortable to prevent blood clots forming in your legs. The catheter is normally removed after 24 hours.

The average hospital stay is 3 days

Are there any side-effects?
Most procedures have a potential for side-effects. You should be reassured that, although all these complications are well-recognised, the majority of patients do not suffer any problems after a urological procedure. Please use the check boxes to tick off individual items when you are happy that they have been discussed to your satisfaction

Common (greater than 1 in 10)
- □ Temporary shoulder tip pain
- □ Temporary abdominal bloating
- □ Temporary insertion of a bladder catheter and wound drain

Occasional (between 1 in 10 and 1 in 50)
- □ Bleeding, infection, pain or hernia of the incision requiring further treatment

Rare (less than 1 in 50)
- □ Bleeding requiring conversion to open surgery or requiring blood transfusion
Entry into lung cavity requiring insertion of a temporary drain

Recognised (or unrecognised) injury to organs/blood vessels requiring conversion to open surgery (or deferred open surgery)

Involvement or injury to nearby local structures (blood vessels, spleen, liver, kidney, lung, pancreas, bowel) requiring more extensive surgery

Anaesthetic or cardiovascular problems possibly requiring intensive care admission (including chest infection, pulmonary embolus, stroke, deep vein thrombosis, heart attack and death)

Further development of cysts which cause similar symptoms

Hospital-acquired infection (overall risk for Addenbrooke’s)

- Colonisation with MRSA (0.01%, 2 in 15,500)
- Clostridium difficile bowel infection (0.02%; 3 in 15,500)
- MRSA bloodstream infection (0.00%; 0 in 15,000)

(These rates may be greater in high-risk patients e.g. with long-term drainage tubes, after removal of the bladder for cancer, after previous infections, after prolonged hospitalisation or after multiple admissions)

What should I expect when I get home?

Before you leave hospital, the team will ensure you are safe to be discharged home. When you leave hospital, you will be given a discharge summary of your admission. This holds important information about your inpatient stay and your operation. If, in the first few weeks after your discharge, you need to call your GP for any reason or to attend another hospital, please take this summary with you to allow the doctors to see details of your treatment. This is particularly important if you need to consult another doctor within a few days of your discharge.

There may be some discomfort from the small incisions in your abdomen but this can normally be controlled with simple painkillers.

All the wounds are closed with absorbable stitches which do not require removal.

It will take 10-14 days to recover fully from the procedure and most people can return to normal activities after 2-4 weeks.
What else should I look out for?
If you develop a temperature, increased redness, throbbing or drainage at the site of the operation, increasing abdominal pain or dizziness, please contact your GP/Ward M4 (01223 348537)/ On-Call Urology Specialist Registrar (via hospital switchboard 01223 245151) immediately.

Are there any other important points?
A follow-up outpatient appointment will normally be arranged for you 6-12 weeks after the operation. At this time, we will be able to inform you of the results of any biopsies taken from the kidney.

If biopsies are taken from the cysts, it will be at least 14-21 days before the pathology results on the tissue removed are available. It is normal practice for the results of all biopsies to be discussed in detail at a multi-disciplinary meeting before any further treatment decisions are made. You and your GP will be informed of the results after this discussion.

This operation on a simple cyst of the kidney only deals with the individual cyst which has been troubling you. It is possible that, at a later date, further cysts will develop although it is unlikely that they will cause symptoms. A further ultrasound scan may be arranged from the outpatient department to determine whether any new cysts have developed.

Driving after surgery
It is your responsibility to ensure that you are fit to drive following your surgery. You do not normally need to notify the DVLA unless you have a medical condition that will last for longer than 3 months after your surgery and may affect your ability to drive. You should, however, check with your insurance company before returning to driving. Your doctors will be happy to provide you with advice on request.

Privacy & Dignity
Same sex bays and bathrooms are offered in all wards except critical care and theatre recovery areas where the use of high-tech equipment and/or specialist one to one care is required.

Hair removal before an operation
For most operations, you do not need to have the hair around the site of the operation removed. However, sometimes the healthcare team may need to remove hair to allow them to see or reach your skin. If the healthcare team consider it is important to remove the hair, they will do this by using an electric hair clipper, with a single-use disposable head, on the day of the surgery. Please do not shave the hair yourself, or use a razor for hair removal, as this can increase the risk of infection to the site of the operation. If you have any questions, please ask the healthcare team who will be happy to discuss this with you.

Is there any research being carried out in this field at Addenbrooke’s Hospital?
All laparoscopic procedures are subject to continuous audit by the British Association of Urological Surgeons Section of Endourology. In addition, the National Institute of Health & Clinical Excellence (NICE) requires that we maintain a careful review of laparoscopic procedures.

Who can I contact for more help or information?

Oncology Nurses

Uro-Oncology Nurse Specialist
01223 586748
- Bladder cancer Nurse Practitioner (haematuria, chemotherapy & BCG)
  01223 274608
- Prostate cancer Nurse Practitioner
  01223 274608 or 216897 or bleep 154-548
- Surgical Care Practitioner
  01223 348590 or 256157 or bleep 154-351

Non-Oncology Nurses

- Urology Nurse Practitioner (incontinence, urodynamics, catheter patients)
  01223 274608 or 586748 or bleep 157-237
- Urology Nurse Practitioner (stoma care)
  01223 349800
- Urology Nurse Practitioner (stone disease)
  01223 349800 or bleep 152 879

Patient Advice & Liaison Centre (PALS)
- Telephone: +44 (0)1223 216756 or 257257
  +44 (0)1223 274432 or 274431
- PatientLine: *801 (from patient bedside telephones only)
- E mail: pals@addenbrookes.nhs.uk
- Mail: PALS, Box No 53
  Addenbrooke's Hospital
  Hills Road, Cambridge, CB2 2QQ

Chaplaincy and Multi-Faith Community
- Telephone: +44 (0)1223 217769
- E mail: chaplaincy@addenbrookes.nhs.uk
- Mail: The Chaplaincy, Box No 105
  Addenbrooke's Hospital
  Hills Road, Cambridge, CB2 2QQ
MINICOM System ("type" system for the hard of hearing)
• Telephone: +44 (0)1223 217589

Access Office (travel, parking & security information)
• Telephone: +44 (0)1223 596060

What should I do with this form?
Thank you for taking the trouble to read this information sheet. If you wish to sign it and retain a copy for your own records, please do so below.

If you would like a copy of this form to be filed in your hospital records for future reference, please let your Urologist or Specialist Nurse know. If you do, however, decide to proceed with the scheduled procedure, you will be asked to sign a separate consent form which will be filed in your hospital notes and you will, in addition, be provided with a copy of the form if you wish.

I have read this information sheet and I accept the information it provides.

How can I get information in alternative formats?
Please ask if you require this information in other languages, large print or audio format: 01223 216032 or patient.information@addenbrookes.nhs.uk

Polish Informacje te można otrzymać w innych językach, w wersji dużym drukiem lub audio. Zamówienia prosimy składać pod numerem: 01223 216032 lub wysyłając e-mail: patient.information@addenbrookes.nhs.uk

Portuguese Se precisar desta informação num outro idioma, em impressão de letras grandes ou formato áudio por favor telefone para o 01223 216032 ou envie uma mensagem para: patient.information@addenbrookes.nhs.uk

Russian Если вам требуется эта информация на другом языке, крупным шрифтом или в аудиоформате, пожалуйста, обращайтесь по телефону 01223 216032 или на вебсайт patient.information@addenbrookes.nhs.uk
Addenbrooke’s is a smoke-free site. You cannot smoke anywhere on the site. Smoking increases the severity of some urological diseases and increases the risk of post-operative complications. For advice on quitting, contact your GP or the NHS smoking helpline free on 0800 169 0 169.
