Repair of a urinary vaginal fistula: procedure-specific information

What is the evidence base for this information?
This leaflet includes advice from consensus panels, the British Association of Urological Surgeons, the Department of Health and evidence-based sources; it is, therefore, a reflection of best practice in the UK. It is intended to supplement any advice you may already have been given by your GP or other healthcare professionals. Alternative treatments are outlined below and can be discussed in more detail with your Urologist or Specialist Nurse.

What does the procedure involve?
Surgical closure of an abnormal connection (resulting in a urinary leak) between the vagina and the bladder or ureter

What are the alternatives to this procedure?
Urine diversion by bladder catheter/nephrostomy, ileal conduit urinary diversion, observation, very occasionally closure of the vagina (colpocleisis)

What should I expect before the procedure?
A pre-clerking appointment will also be sent to you to assess your general fitness, to screen for the carriage of MRSA and to perform some baseline investigations.

You will usually be admitted on the same day as your surgery. After admission, you will be seen by members of the medical team which may include the Consultant, Specialist Registrar, House Officer, your named nurse and possibly a Urology Nurse Specialist. You will also be seen by the anaesthetist before the operation.

You will be given intravenous antibiotics at the time the anaesthetic is given, and possibly after surgery too.

You will be asked not to eat or drink for 6 hours before surgery and, immediately before the operation, you may be given a pre-medication by the anaesthetist which will make you dry-mouthed and pleasantly sleepy.

You will be given an injection under the skin of a drug (Clexane), that, along with the help of elasticated stockings provided by the ward, will help prevent thrombosis (clots) in the veins.
Please be sure to inform your Urologist in advance of your surgery if you have any of the following:

- an artificial heart valve
• a coronary artery stent
• a heart pacemaker or defibrillator
• an artificial joint
• an artificial blood vessel graft
• a neurosurgical shunt
• any other implanted foreign body
• a prescription for Warfarin, Aspirin or Clopidogrel (Plavix®)
• a previous or current MRSA infection
• high risk of variant CJD (if you have received a corneal transplant, a neurosurgical dural transplant or previous injections of human-derived growth hormone)

What happens during the procedure?
Normally, a full general anaesthetic will be used and you will be asleep throughout the procedure. In some patients, the anaesthetist may also use an epidural anaesthetic which produces freedom from pain post-operatively.

If your surgeon has decided to close a bladder fistula from below, the procedure will be performed entirely through the vagina, following which a pack is usually left in place in the vagina.

![Image of bladder and vaginal closure]

Usually, an abdominal approach is necessary and the procedure will be performed through either a vertical or a transverse incision in your lower abdomen. The fistula is dissected out and the connection between the urinary tract and the vagina divided. It is usual to position part of the fatty envelope from inside the abdomen (the omentum) to prevent the fistula from recurring.

What happens immediately after the procedure?
The average stay in hospital will last approximately 10-14 days.

Two catheters will probably be placed in the bladder for up to two to three weeks, one via the urethra and one (suprapubic catheter) via a small incision in the skin over the bladder. There will be a drainage tube close to the wound, to drain fluid away from the internal area where the operation has been done. A tube may be placed through the nose to drain the stomach.
After your operation, you may be in the Special Recovery area of the operating theatre before returning to the ward; visiting times in these areas are flexible and will depend on when you return from the operating theatre. You will have a drip in your arm.

You will be encouraged to mobilise as soon as possible after the operation because this encourages the bowel to begin working. We will start you on fluid drinks and food as soon as possible.

Normally, we use elastic stockings to minimise the risk of a blood clot (deep vein thrombosis) in your legs. A physiotherapist will come and show you some deep breathing and leg exercises, and you will sit out in a chair for a short time soon after your operation.

It will, however, take at least 6 months for you to recover fully from this surgery, although much of the recovery comes a good deal sooner than this.

**Are there any side-effects?**

Most procedures have a potential for side-effects. You should be reassured that, although all these complications are well-recognised, the majority of patients do not suffer any problems after a urological procedure.

Please use the check boxes to tick off individual items when you are happy that they have been discussed to your satisfaction:

**Common (greater than 1 in 10)**
- □ Infection or hernia of the incision requiring further treatment
- □ Altered bladder function in the short- or long-term.

**Occasional (between 1 in 10 and 1 in 50)**
- □ Anaesthetic or cardiovascular problems possibly requiring intensive care admission (including chest infection, pulmonary embolus, stroke, deep vein thrombosis, heart attack and death)
- □ Blood loss requiring transfusions or repeat surgery
- □ Failure of the operation with leakage of urine through the vagina, requiring re-operation
- □ Scarring of the ureters requiring further surgery

**Rare (less than 1 in 50)**
- □ None

**Hospital-acquired infection (overall risk for Addenbrooke’s)**
- □ Colonisation with MRSA (0.02%, 1 in 5,000)
- □ Clostridium difficile bowel infection (0.04%; 1 in 2,500)
- □ MRSA bloodstream infection (0.01%; 1 in 10,000)

(These rates may be greater in high-risk patients e.g. with long-term drainage tubes, after removal of the bladder for cancer,
after previous infections, after prolonged hospitalisation or after multiple admissions)

What should I expect when I get home?
When you leave hospital, you will be given a “draft” discharge summary of your admission. This holds important information about your inpatient stay and your operation. If, in the first few weeks after your discharge, you need to call your GP for any reason or to attend another hospital, please take this summary with you to allow the doctors to see details of your treatment. This is particularly important if you need to consult another doctor within a few days of your discharge.

You will require pain-killing tablets at home for two or three weeks and it may take two or three weeks at home to become comfortably mobile.

You may go home with one or both catheters still in place, and have a planned return to hospital for these to be removed. If so, you or your carers will be taught how to look after the catheters and the drainage systems for them.

You should avoid driving for at least six weeks, and it may be longer before this is possible.

If you work, you will need a minimum of six weeks off, and it may be significantly longer if your work involves physical activity.

Heavy lifting should be avoided for 6 weeks

Sexual intercourse should be avoided for at least a month.

You may see blood in the urine or vaginal discharge for up to a month after surgery.

What else should I look out for?
If you go home with catheters, you or your carers should check regularly to ensure that urine is draining via the catheters, which confirms that the catheters have not blocked. If the catheters both block this can put pressure on the suture line in the bladder, and so the catheters would need to be flushed and unblocked very promptly.

Are there any other important points?
The Urology Specialist Nurses will keep in contact by phone and by clinic visits in the first couple of months after surgery, and be available for long-term follow-up.

A follow-up outpatient appointment will be arranged at about 6-8 weeks after surgery.

Driving after surgery
It is your responsibility to ensure that you are fit to drive following your surgery. You do not normally need to notify the DVLA unless you have a medical condition
that will last for longer than 3 months after your surgery and may affect your ability to drive. You should, however, check with your insurance company before returning to driving. Your doctors will be happy to provide you with advice on request.

Is there any research being carried out in this field at Addenbrooke’s Hospital?

There is no specific research in this area at the moment but all operative procedures performed in the department are subject to rigorous audit at a monthly Audit & Clinical Governance meeting.

Who can I contact for more help or information?

Oncology Nurses
- Uro-Oncology Nurse Specialist
  01223 586748
- Bladder cancer Nurse Practitioner (haematuria, chemotherapy & BCG)
  01223 274608
- Prostate cancer Nurse Practitioner
  01223 247608 or 216897 or bleep 154-548
- Surgical Care Practitioner
  01223 348590 or 256157 or bleep 154-134

Non-Oncology Nurses
- Urology Nurse Practitioner (incontinence, urodynamics, catheter patients)
  01223 274608 or 586748
- Urology Nurse Practitioner (stoma care)
  01223 349800

Patient Advice & Liaison Centre (PALS)
- Telephone
  +44 (0)1223 216756 or 257257
  +44 (0)1223 274432 or 274431
- PatientLine
  *801 (from patient bedside telephones only)
- E mail
  pals@addenbrookes.nhs.uk
- Mail
  PALS, Box No 53
  Addenbrooke’s Hospital
  Hills Road, Cambridge, CB2 2QQ
Chaplaincy and Multi-Faith Community
- Telephone +44 (0)1223 217769
- E mail derek.fraser@addenbrookes.nhs.uk
- Mail The Chaplaincy, Box No 105 Addenbrooke's Hospital Hills Road, Cambridge, CB2 2QQ

MINICOM System ("type" system for the hard of hearing)
- Telephone +44 (0)1223 274604

Access Office (travel, parking & security information)
- Telephone +44 (0)1223 586969

What should I do with this form?
Thank you for taking the trouble to read this information sheet. If you wish to sign it and retain a copy for your own records, please do so below.

If you would like a copy of this form to be filed in your hospital records for future reference, please let your Urologist or Specialist Nurse know. If you do, however, decide to proceed with the scheduled procedure, you will be asked to sign a separate consent form which will be filed in your hospital notes and you will, in addition, be provided with a copy of the form if you wish.

I have read this information sheet and I accept the information it provides.

Signature.......................................................Date...........................................

How can I get information in alternative formats?
Please ask if you require this information in other languages, large print or audio format: 01223 216032 or patient.information@addenbrookes.nhs.uk

Polish Informacje te można otrzymać w innych językach, w wersji dużym drukiem lub audio. Zamówienia prosimy składać pod numerem: 01223 216032 lub wysyłając e-mail: patient.information@addenbrookes.nhs.uk

Portuguese Se precisar desta informação num outro idioma, em impressão de letras grandes ou formato áudio por favor telefone para o 01223 216032 ou envie uma mensagem para: patient.information@addenbrookes.nhs.uk
Addenbrooke's is smoke-free. You cannot smoke anywhere on the site. Smoking increases the severity of some urological diseases and increases the risk of post-operative complications. For advice on quitting, contact your GP or the NHS smoking helpline free on 0800 169 0 169.
